

## Serious exercises

1. <http://dummy.restapiexample.com/api/v1/employees>. This is an API link about employees in a company.

Write a JavaScript code to **GET** their information and render into browser as below:

- Nandakuamr S
- Ereatlotzx 123456
- NISHI
- FIT MOSTAR 3
- Ereatlotz
- testy4y1111
- testys4ys1111
- TonicOne
- Done
- NEMOJ DIRATI 2 dio
- werf
- testyss4ys1111
- srini
- testoqsd4
- neki novi
- dsdfg
- Ereatwlotmm
- 22222222222222
- 11111111111111

*(you can use other ways to render employees without `<ul></ul>`, `<li></li>`)*

2. Create a **div** element with **id="employee\_salary"** above the list of employees.

Write JavaScript code to display the employee's salary in the div element above when mouse over his/her name.

*Hint: the event when we mouse over any element is 'mouseover'*

### 3. (OPTIONAL) Research the **POST method** and:

Create the button above the list of employees.

Write a JavaScript code to create a new employee when clicking on the button.

You need to execute **POST method**, send an object about the employee to create him/her.

Object example:

```
{  
  "name": "QUAN",  
  "salary": "2000",  
  "age": "23",  
}
```

If your **POST method** successfully executed, you can scroll to the bottom of the browser to see new employee.
